FUTURE FOCUS

Career Development

My short, mid, and long-term career goals and the action plans to achieve them.

GOALS

Career Goals & Action Plans

A structured roadmap from where I am today to where I want to be as a software developer.

SHORT TERM · 0–12 MONTHS

Mid Level Software Developer

Secure an entry-level software developer role in Australia. Use my existing PHP, Laravel, and MySQL skills to contribute to a professional development team from day one.

Action Plan

01 Complete current postgraduate IT program with strong grades

02 Build and publish a professional ePortfolio and GitHub profile

03 Apply to mid level developer roles on Seek, LinkedIn, and IT job boards

04 Attend local IT networking events

MID TERM · 1–3 YEARS

Full Stack Developer

Grow into a full stack developer role with deeper expertise across both backend and frontend layers, contributing meaningfully to system architecture and design decisions.

Action Plan

01 Learn a modern JavaScript framework such as Vue.js or React

02 Gain experience with RESTful API design and integration

03 Study DevOps fundamentals including Docker and cloud services (AWS or Azure)

04 Complete at least one industry

LONG TERM · 3–7 YEARS

Senior Developer / Technical Lead

Progress to a senior developer or technical lead position where I can mentor junior developers, contribute to system design decisions, and lead development teams effectively.

Action Plan

01 Deepen expertise in software architecture, design patterns, and system scalability

02 Develop leadership and project management skills through formal training

03 Build a professional network through industry events,

questions and coding challenges (LeetCode)

industry for guidance and support

projects and build public visibility as a developer

05 Mentor junior developers and actively contribute to team knowledge sharing

LEARNING PATH

Skills Development Roadmap

Technologies and areas I am actively studying or planning to learn.

Advanced Laravel

Deepening knowledge of queues, jobs, events, and testing in Laravel to build production-grade applications.

ACTIVE

Version Control with Git

Improving proficiency with branching strategies, pull requests, and collaborative Git workflows used in Australian workplaces.

ACTIVE

Software Testing

Learning PHPUnit for unit testing in Laravel and exploring test-driven development practices.

Vue.js or React

Learn a modern JavaScript frontend framework to complement Laravel and expand into full-stack development.

PLANNED

Docker & DevOps Basics

Understand containerisation and CI/CD pipelines — key skills for modern Australian development teams.

PLANNED

AWS Cloud Fundamentals

Complete AWS Cloud Practitioner certification to understand cloud infrastructure and deployment practices.

COMMUNITY

ACS Membership

Planning to join the Australian Computer Society (ACS) to access professional development resources, networking events, and industry recognition.

GitHub Portfolio

Building a public GitHub profile with open-source contributions, personal projects, and code samples to demonstrate technical capability to employers.

Online Learning

Actively using platforms such as Laracasts, YouTube, and official documentation to continuously improve technical knowledge and stay current with industry trends.
